

Main Feature Overview

We are highly focused on customer satisfaction and security matters . Customers can save location and search by saved location as well as default location and search product by multi subcategories. Users should be able to see vendor profiles by scanning QR code and add the product into cart by scanning barcodes with a mobile camera very fast. vendors should be able to upload barcodes to the system by scanning barcodes into the seller app. Admin should see all the qr code as well as barcode list of each product and each vendor able to see the scan report store wise and total store scan report.admin should see times of searches for store and product by the customer. This should be very fast and responsive and accurate. We need till One year of support and maintenance and app submission etc . Following changes should reflect the existing system or need to work correctly with the existing one. There should not be any calculation error.

Detailed Features Description

Seller App

1. **Product Add:** Vendors should be able to save Products barcodes by scanning mobile cameras within a seconds with quick detection there should attractive icon of barcode scanning in the Product add page and this should not take duplicate barcodes which are already taken if they are taken already or there should popup alerts like already added or with barcodes number it should show its added successfully message.
